

NORTHWEST EYE SURGEONS OF SEATTLE

We Want Your SMILE

We want your SMILE You have heard us talking about SMILE, but have you considered it for yourself? SMILE is the latest technology in laser vision correction. There are several reasons to consider this procedure if you are nearsighted or have blurry vision and would like to reduce or eliminate your use of glasses and contacts.

If you haven't thought about it for yourself, contact your eye care professional to talk about the possibilities. We want you to understand your options, and we will work with you to determine the best outcome for your vision.

We want you to see your SMILE!

You won't decide alone.

Your eye doctor will help you determine if SMILE might be a vision correction option for you to consider. Each patient gets a detailed eye examination with an optometrist or ophthalmologist to fully determine if he or she is a good SMILE candidate. Things like the nature and degree of the refractive error as well as curvature and thickness of the cornea will be deciding factors.

It's gentle, with quick visual recovery time.

SMILE is a minimally invasive laser vision correction procedure, making it a desired option for many patients. Like LASIK, SMILE has minimal surgical risks – it's a proven and consistent procedure for patients desiring to see better without glasses and contacts. Patients can often get back to many daily activities – like driving, showering and working – in just one day!

Call us today at (855) 64-SMILE and we will help you determine whether SMILE is the laser vision correction option for you.
